Hollow Tine Aerator

This is one of the most straightforward tools for aerating your lawn. Simply place your foot on the central tread, put your weight on it, and the hollow tines will go deep into the soil. Relieves compaction and stimulates root growth. Use in moist conditions in rows around 10cm (4in) apart. Plugs will automatically eject and should either be swept up or left as a top-dressing.

Lawn Scarifier

This scarifier has 11 blades for easy clearance of moss or leaves and a telescopic handle that extends from 97-150cm (38-59in). It has a simple twist and lock mechanism on the handle, and wheels for easy movement across the surface of your lawn. The lower you hold the scarifier, the deeper the blades will cut into the soil. 35cm (14in) wide.
